

ng-repeat

Summary

- ✧ ng-repeat is a directive that extends the functionality of HTML elements it's applied to
 - Behaves very similarly to for-each construct
- ✧ ng-repeat="item in collection", where item can now be used in interpolation as an item in the collection at particular index of iteration
- ✧ ng-repeat exposes a special \$index property to the body of its host tag
 - Holds the numeric index of the current item in the loop
